Management Development Programme

On

Gender, Equity & Water Management

20th – 21st August 2018

ORGANIZED BY

**Environment Protection Training And
Research Institute (EPTRI),**

**Coca-Cola Department Of Regional Water
Studies, Teri School of Advanced Studies**

&

**International Centre of Excellence in
Water Resources Management
(ICE WaRM)**

PROGRAMME OVERVIEW

Gender mainstreaming has been part of the international discourse on Integrated Water Resource Management for many years. There have been several efforts and initiatives in making the water sector both more gender balanced and gender sensitive. However, critical challenges still remain to be addressed.

This Management Development programme (MDP) is intended to develop a good conceptual and theoretical understanding of gender, rights and equity issues among participants while providing them with exposure to the practical challenges in making the water sector more gender balanced and gender sensitive.

The programme also aims to build capacities of participants with respect to gender equity by suggesting practical strategies to enable them to work for sustainable and gender sensitive management of water resources. The overall objective is to make the participants better informed and motivated to make changes within their overall sphere of influence as well as to emerge as stronger advocates for gender equity at a personal level.

OBJECTIVES

- Introduce participants to new understandings of development with respect to gender equity and water resource management
- Exploring critical assumptions about access to and management of water using case studies and examples from a gender perspective.
- Build capacities of participants with respect to gender equity by providing practical strategies to enable them to work for sustainable and gender sensitive management of water resources

WHO SHOULD ATTEND?

- Practitioners from Government
- NGOs
- Urban Local Bodies
- Multi-Level Organisations
- Journalists
- Corporates

PEDAGOGY

The MDP shall be conducted over 2 days and involve a mix of lectures, case presentations and analysis, short films, as well as some group work to facilitate cross-learning and synthesis.

KEY CONTENTS

- Conceptualizing gender
- Gender bias of the technology in water sector and the need for development of various indicators on the part of women to secure water resources
- Shifting the focus from women to gender relations and assessing the impacts of drinking water supply interventions
- Mainstreaming gender in water policy and planning
- Patriarchal nature of the institutions of local governance and the neo liberal policies in water sector
- The role of international development organisations in policy formulation for mitigating the constraints faced by women
- Challenges faced by women in water sector in South Asia
- Approaches needed to ensure increased participation of women in water sector and the associated benefits
- Contextual and socio-technical nature of property rights over water resources
- Precedence of state laws over norms & practices; and the need for incentives
- The difference between materialization and concretization of water rights, and the importance of social capital in accessing water resources.
- The concept of institutions in shaping access to water resources, as a brake to resource degradation and in building up of social capital
- Interactions of gender relations with social differentiation and the dynamics of such interactions
